Anthracnose disease in mango pdf

Recommendations vary with crop and cultivation system. On leaves, lesions begin as small, angles, brown with black spots that can enlarge to form vast dead areas. negative points the fruits of repeated affected by anthracnose develop dark brown decay spots, prominent, black before or after harvesting and can fall from trees prematurely. most green fruit infections remain latent and largely invisible until ripening. Post-harvested dives (e.g. carbendazim) and hot water (both treatments are 5 minutes at 52°C) control fruit infections, preventing storage rot. management requires pruning of trees and fungus applications. # When using a pesticide, always wear protective clothing and follow the instructions on the product label, such as dosing, application timing and pre-harvest range. So the fruits that appear healthy to the crop can develop significant anthracnose symptoms quickly to ripening. a second type of symptom on the fruits consists of a symptom of "stamina of the trunk" that lends an effect "leather of the alligator" and also causing fruits to develop wide and deep cracks in the epidermis that extend in the pulp. lions on stems and fruits can produce masses of orange and pinkish spores in humid conditions. hot and humid weather conditions favor anthracnose infection in the field. Applications must start when the flowers appear and continue at recommended intervals (for example, 3 to 4 weeks) until the pre-harvest waiting period. Chemical/frequent and timely application of chemicals is necessary to control the glomerella leaf and flower blight. If you use carbendazim, allow 3 liters dive perof fruit. They have a good flavor, and meat with low fiber. These diseases are serious in high rainy areas and difficult to control. Anthracnose (a fungal infection) is the most important disease that mango producers must fight. In the field, the anthracnose can cause a one seropS. gnitsevah dna tmemeganam ysae rof llat m 4 naht ssel eb dluohs seerT. seirtmuoc dnalsi cifcaP ni detsel eb ot deen dna sugnuf eht ot ecnatsiser emos evah ot dias era soitseirav enipplihP / eseniñC-odñISEITEIRAV TNATSISER ytidimuh euder ot yponac eert eht ghuorht yleerf wolf ot ria wolla ot seert enurp ot natropmi si tLORTNOC LARUTLUC .sturf dna.) selcinap (srretsulc rowolf, seloitpe, sgiwt, sevaeñ no rucco smotpmys esoncarhtnaA.sediñroipsoeolg muhcirtotelloC yb desuac esaeid lagnuf a si ti .ñibortsyzoa Á ro, zarohlcorp.) etahpluss reppoc Á ro edirohcyo reppoc, edixo reppoc, edixordyh Á reppoc (reppoc, bezocnam gnidulcni, esoncarhtna fo lortnoc eht morf deretsiger era sedicignuf lareves, ailartsA ni ... esaeid illihC tuoba noitamrofni srevoç cipot sihTsesaeid illihC.sesaesid reB tuoba noitamrofni srevoç Cipot Sihtsesaeid Reb ...
